How to put your first project up on your website

1. Use Fugu to upload your completed .mp3 file to the audio folder on your website

2. Use Fugu to download your project1.html file to the desktop of your local machine.

3. Open the project1.html file in TextEdit or similar ASCII text editor. It should look like this:

```
<HTML>
<HEAD>
<META HTTP-EQUIV="Content-Type" CONTENT="text/html; charset=iso-8859-1">
<TITLE>Firstname Lastname Project 1</TITLE>
</HEAD>

<BODY bgcolor="#FFFFFF" background="graphics/background.jpg" TEXT="#000000">
<H1 ALIGN=CENTER><FONT COLOR="#008800" SIZE=+3>Title</FONT></H1>
<p align="left">Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. Description of the first project. </p>
<p align="center"><img src="graphics/graphic.jpg" width="600" height="250" border="1"></p>
<p align="center">
  <embed src="audio/templatemusic.mp3" width="600" height="18" autostart="false"></embed>
</p></BODY>
</HTML>
```

4. Edit the project1.html file similar to what you see below from my demo site. Be sure to reference the exact name of your .mp3 file in your audio folder. (It's shown in bold below>) You also need a name for the project and a good description

```
<HTML>
<HEAD>
<META HTTP-EQUIV="Content-Type" CONTENT="text/html; charset=iso-8859-1">
<TITLE>Dave Sebald MUS 3313 Project 1</TITLE>
</HEAD>

<BODY bgcolor="#FFFFFF" background="graphics/background.jpg" TEXT="#000000">
<H1 ALIGN=CENTER><FONT COLOR="#008800" SIZE=+3>Welcome Message</FONT></H1>
<p align="left">I created this welcome message entirely in GarageBand.  It was my first music technology project and demonstrates several different types of audio: MIDI sequences, audio loops, and recorded narration.  You can play or stop it with the controller below the picture.</p>
<p align="center"><img src="graphics/welcome_sebaldd.jpg" border="1"></p>
<p align="center">
  <embed src="audio/welcome_sebaldd.mp3" width="724" height="18" autostart="false"></embed>
</p></BODY>
</HTML>
```

5. Save the edited file to your desktop right over the original project1.html file.

6. Use Fugu to upload this changed project1.html file to your website.

You'll be using this same process throughout the semester to put up assignments for grading and in-class evaluations. Don't be sloppy. Learn it well.
